Name	2:			Plate Tectonics
Date:		Period:		Earth Science
		Packet: Volcanc	es and Hazards	 }
CLAS	S NOTES			
•	Volcanoes -			
•	Caldera -			
•	Volcanoes are Hotspc 	generally found at hotspots or the second	where tectonic plates are div	erging or converging
	•	Example: Hawaiian Islands		
	Conver	ging and diverging tectonic pla	tes	
		Convergent	Divergent	

- Types of Volcanoes:
 - <u>Composite Volcano</u> [stratovolcano] ______
 - Most deadly with violent eruptions
 - Pyroclastic Flow _____

Packet: Volcanoes and Hazards

Types	of Volcanoes [continued]:
•	Shield Volcano -
•	Usually occur around hotspots with non-explosive eruptions <u>Cinder Cones</u> -
	Usually smaller with short lived eruptions
•	Extinct Volcano -

Packet: Volcanoes and Hazards

PART I: MULTIPLE CHOICE

Base your answers to questions 1 through 5 on the passage and data tables below, on the map on the next page, and on your knowledge of Earth science. The data tables show trends [patterns] of two lines of Hawaiian island volcanoes, the Loa trend and the Kea trend. For these trends, ages and distances of the Hawaiian island volcanoes are shown. The map shows the locations of volcanoes, labeled with Xs, that make up each trend line.

Hawaiian Volcano Trends

The Hawaiian volcanic island chain, located on the Pacific Plate, stretches over 600 kilometers. This chain of large volcanoes has grown from the seafloor to heights of over 4000 meters. Geologists have noted that there appear to be two lines, or "trends," of volcanoes—one that includes Mauna Loa and one that includes Mauna Kea. Loihi and Kilauea are the most recent active volcanoes on the two trends shown on the map.

Loa Trend						
Loa Trend Volcanoes	Volcano Age (million years)	Distance from Loihi (km)				
Kauai	4.6	575				
Waianae	3.7	465				
Koolau	2.2	375				
West Molokai	1.7	350				
Lanai	1.2	300				
Kahoolawe	1.1	250				
Hualalai	0.3	130				
Mauna Loa	0.2	70				
Loihi	0	0				

Kea Irend							
Kea Trend Volcanoes	Volcano Age (million years)	Distance from Kilauea (km)					
East Molokai	1.7	256					
West Maui	1.5	221					
Haleakala	0.9	182					
Kohala	0.5	100					
Mauna Kea	0.4	54					
Kilauea	0.1	0					

Packet: Volcanoes and Hazards

- 1. Identify the two volcanoes, one from each trend, that have the same age.
 - a. Loihi and Haleakala
 - b. West Molokai and East Molokai
 - c. Kauai and West Maui
 - d. Lanai and Kohala
- 2. State the general relationship between the age of the volcanoes and the distance from Loihi.
 - a. inverse relationship
 - b. direct relationship
 - c. cyclic relationship
 - d. there is no relationship
- 3. Identify the compass direction in which the Pacific Plate has moved during the last 4.6 million years
 - a. southeast
 - b. northwest
 - c. southwest
 - d. Northeast
- 4. Identify the tectonic feature beneath the Pacific Plate that caused volcanoes to form in both trends.
 - a. converging plate boundary
 - b. diverging plate boundary
 - c. transform plate boundary
 - d. hot spot
- 5. The average distance between the volcanoes along the Kea trend is 51.2 kilometers. Place an X on the map in your answer booklet to identify the location on the seafloor where the next volcano will most likely form as a part of the Kea trend.
